‘Sherlock’ aimed at cutting investigation times by 30%

An online fraud investigation tool for the insurance industry was launched today by CRIF Decision Solutions.

Sherlock provides access to identity verification and consumer intelligence data based on 40 million claims records and 27 million linked addresses and tools for checking links between parties and vehicle, passport and other information.

CRIF Decision Solutions director Sara Costantini said Sherlock was expected to control costs for insurers through its ‘pay-as-you-go’ model and reduce investigation times by about 30%.
