

Counter Fraud Intelligence in One Click from CRIF

London June 12, 2013: CRIF Decision Solutions Ltd (CRIF) launches 'Sherlock' a desktop, case driven investigation tool for the insurance industry. Designed to deliver counter fraud intelligence to investigators in one click, Sherlock can be utilized whenever fraud is suspected.

An easy to use, web based application, accessed via individual user ID and password; Sherlock provides a single point of access to best of breed data sources. Users can run real time, interactive investigations and receive the consolidated results on a single screen and in the case summary report.

Available information and validation tools include, vehicle checks, passport verification, landline and mobile number checks, CCJ and bankruptcy details, utility bills linked to addresses, enriched with alerts on death records and PEP & Sanctions. Web based and menu driven, Sherlock requires no investment in technology or staff training and provides organizations with flexibility and transparency via its 'pay per click pricing model'. Users can print and download their case reports, as well as benefit from comprehensive audit trails of the investigations undertaken enabling users to review details on previous activity.
